

## On the Subject of Keypasses

*This password isn't even close to meeting security standards: No numbers or symbols and a limited selection of usable characters. This is ridiculous!*

1. There are five columns each with six keys.
2. Each column has two decoys and four valid keys whose labels form only one of the four letter words below.
3. Select one valid key from each column to spell the only one of the five letter words below that can be spelled with valid keys from left to right.
